**South Coast Oregon Field Notes: Spring 2006**  
**Compiled by Tim Rodenkirk**  
**Adapted by Ron Halvorson**

March and April were rainy and cool, with an occasional dry (noticeably late for many species including Orange-crowned V) in most locations in western Oregon including on the south coast. The last few days of April and first few days of May witnessed both Western Sandpipers and Semipalmated Plovers at B about the first three weeks which helped get the passerine record second record of Crested Caracara, its fourth record of both Coos Co. also did well, with its first record of White-throated and fourth record of Sage Thrasher. Eurasian Collared-Dove and second year in-a-row in Coos Co.

**Date (last) County Location**

day or two here and there. This retarded the passerine migration which was Warblers which many observers noted were two to three weeks later than us coast. Flycatchers, in particular, also seemed late this spring on the south coast. The most incredible shorebird migration in recent memory, with record numbers at Bandon Marsh NWR. May started out quite nice with summer like conditions and migration back on track. Rarities were numerous, with Curry Co. getting its first Blue Jay and Ferruginous Hawk, and fifth record of Mountain Bluebird. First Swift and second records of Swainson's Hawk and Great-tailed Grackle, and, continuing their expansion, were found for the fourth year straight in Curry

**Comments**

two flocks migrating overhead

Catching Slough pastures

Aleutian ssp. last seen in large numbers on 18 Apr

through 18 Mar, overwintering on Winter L.- only the 4th Coos record  
through end of period

first of the season at the dog pond  
first of the season

through end of period

at least one through end of period  
female- only spring bird reported  
through end of period  
through the end of period

through end of period

rare on the outer coast in Coos Co.

major offshore movement noted

many thousand/hr of Pacific/Common Loons, probably mostly Pacifics

many thousand/hr of both Pacific/Common Loon, probably mostly Pacifics

in breeding plumage- seen in river along Hwy 126

latest date in Coos this spring

found alive and not to happy in a 5-gal bucket aboard a boat- the bird was helped back to sea

latest date in Coos this spring

only seen every few years on pelagics off Coos Co.

probably the most ever on a Coos pelagic

major movement noted

seen inside bay around Charleston harbor area

Apr-May, birds breeding again in Haynes Inlet area

first sighting of the spring- a few birds hang out on the Chetco and Winchuck Rivers during spring and fall but no breeding has been observed yet

first bird of the spring- probably breed near the Port but no nest have been found

first of season near Fiddle Ck.

all birds seen simultaneously at the mouth- a record count for this species at this spot by the observer who studied this species for several years in this area

pair observed building nest on Oceanview Drive

through end of period, probably breeding in area again

through at least 22 May, possibly breeding in the area

bird seen well as it flew right overhead- 2nd Coos record  
first discovered on 26 Feb on a private ranch, 4th Curry record  
private ranch, photos by DM; report submitted to OBRC.

overwintering bird last seen on this date  
flyover probably this species based on its tuee-ooo-EEE call

the highest total ever in Oregon

bird at nest  
oystercatcher survey  
first Coos migrants

grand total from Florence area on the NAMC

all one flock- heard calls from most birds also

Fiddle Creek Road area SE of town

overwintering birds still around along Coos Bay waterfront  
large number for Curry Co.

one flock of migrating birds

seen on a private ranch NE of Floras L.- highest total ever in Oregon with  
900 there on 5 May

through end of period

Driftwood Shores north of Florence  
on Bandon Beach

latest Coos spring date for this species on record

rare spring migrant

passage rate for count done in AM

up to 40,000/hour; a total of 100-150,000 shorebirds seen that day the majority being this species

up to 20,000/hour; count done in AM

one estimate (TR) with 75,000 seen later in the day
